

ANAHEIM CONVENTION CENTER GREEN PROGRAM

- Aramark Leisure Services, the exclusive Catering and Concessionaire for the Anaheim Convention Center, implemented a Sustainability Program in 2004 (see attachment for details)
- All toilet paper, paper towels and toilet seat covers are made from 100% recyclable material.
- We have (2) trash compactors on site that are dedicated to cardboard recycling.
- We recently purchased (2) bailers that compress various recyclables such as plastic which are then recycled offsite by Anaheim Disposal.
- All other trash is recycled offsite by Anaheim Disposal. 55% of the waste is recyclable.
- All Concession Stands at the Convention Center are equipped with recycling trash cans for plastic bottles; Aramark will no longer be using aluminum cans.
- Aramark has purchased its own herd of free range, grass fed cattle.
- Currently, we are in the process of changing all of our chemicals to “green” friendly chemicals.

- Anaheim Public Utilities is in the process of changing out the high energy 8ft. fluorescent lamps to 4ft. lamps in the Exhibit Halls. The 4ft. lamps generate the same amount of light as the 8ft. lamps, but consume about $\frac{1}{4}$ of the energy.
- All Meeting Rooms have T8 energy efficient lamps.
- The Lobby area has T5 energy efficient lamps.
- Exhibit Hall D has photo voltaic panels on the roof which generate electricity resulting in less of a demand on our public utilities.
- We use compact fluorescents in all of the restrooms and lobby areas.
- In August of 2004, we increased the foot candle level (lighting level) in the Arena by four times and decreased the electric cost by 90%.
- In all lobbies on the 2nd and 3rd floor, we changed from 250 watt par 38 lamps to ER 75-30 lamps resulting in approximately 60% savings in electricity.
- A lighting computer runs the entire building and the computer is programmed to turn the lights on/off as necessary in order to conserve energy.
- All lobby and finger lobby areas have cleaning switches to assist cleaning crews. Lights remain on in specific areas in two hour increments in order to conserve electricity.
- We now install electronic ballast to save energy on our fluorescent and H.I.D fixtures in the Exhibit Halls.

- We recycle all used fluorescent and H.I.D. lights, all batteries and all electronic equipment such as computers, VCR's, televisions.
- The Reader Board and Scoreboard in the Arena have LED lamps instead of incandescent lamps.
- Restrooms are equipped with energy efficient toilets and motion sensor sinks to conserve water.
- All Lobby carpet on all levels is certified "green."
- Where applicable, any outdated HVAC equipment is replaced with energy efficient models determined by recommendations from the Utilities Department.
- We are seeking LEED EBOM certification within the next fiscal year.
- We are in the process of seeking LED solutions to our lighting wherever it is feasible- both indoors and out.
- We have put into place strict energy conservation rules about the use of the escalators and the air conditioning systems.
